

MICRO-HEAD

Automated sample preparation
and liquid handling

We design, develop, and deliver modular, easy-to-use automation solutions for sample preparation.

KEY FEATURES

- Compact, multifunctional robotic tool for automated sample preparation exceeding standard pipetting workflows
- Multichannel head for flexible individual pipetting and dispensing
- Adaptersystem enabling mixing, filtration, purification, extraction or dilution directly during pipetting

YOUR BENEFITS

- Accelerate sample preparation by combining multiple process steps and reducing manual hands-on time
- Reduce personnel and equipment costs while making automation a feasible option for small laboratories

APPLICATION AREAS

- Small laboratories across diagnostic, analytical and research sectors
